

good for employers good for employees

MYzone[™]
Technologies

The **MyZone Worker Alert System** increases personal awareness by allowing employees to take control of their own personal exclusion area. Safety behavioural studies show 63% of accidents and incidents in the workplace are caused by alpha mode, more widely known as 'daydreaming' or 'switching off'.

Employer benefits:

- MyZone is a demand-led solution, driven by an employer's duty to use the best available technology, not only to safeguard employees from hazards wherever and whenever possible, but also to ensure any associated litigation against the company is mitigated.
- Employers must take all reasonable steps to protect the health and safety of every employee. With its simple, non-language dependent functionality, the MyZone system is easy to integrate into your working environment - engaging with all site personnel to participate in a safety first culture for increased awareness.
- MyZone empowers individuals to take responsibility for their own actions, rather than relying solely on the actions of others to avert accidents or injury. MyZone makes safety-at-work, personal.
- MyZone is solely designed with personal protection in mind. It's autonomous from any IP network, no data is collected and there's no feedback to management.
- Our personal alarm solution is scalable and represents excellent value for time and money. The first step, which we arrange, is an initial survey to identify and agree perceived hazards on your site. From this point onward, MyZone requires minimal client involvement. Full implementation, ongoing technical support, collection, delivery and recycling services are all included in the cost.

Employee benefits:

- To help prevent accidents, MyZone gives ownership of personal safety to each and every individual on site.
- Our technology is really quick and easy to use. There's no complicated user instructions to read. All the wearer needs to do is clip the MyZone receiver onto the back of their hard hat and react to any warnings given by a discreet vibrating buzzer. There are no fiddly switches to contend with.
- MyZone provides complete situational awareness on site. It continuously tracks defined hazards and intelligently monitors individual threats (such as site vehicles). Warnings are given for each hazard using 360° capability, eliminating the risk of any vehicular 'blind spots'.
- Our system excels in noisy environments and does not contribute to noise pollution. The discreet vibration given by the receiver (attached to the rear of the hard hat), only alerts the individual wearer and can be used with ear defenders.
- MyZone enabled sites allow employees to take responsibility for their own actions within their personal exclusion area, removing the dependency on how others operate potential hazards on site.
- MyZone is an aid to personal awareness and should be used in addition to established and safe on site working practices.
